## How to Calculate Storage Capacities:

## SHELLED CORN

Round storage: multiply the diameter by its equal number;
i.e. 12 foot diameter $\times 12$. Then multiply that total by footage depth. Multiply your sum by 630 .

Rectangular storage: multiply the footage width $x$ depth $x$ length. Multiply this total by 4 and divide by 5 . The result is now 5616 bushels of No. 2 Corn @ 15.5\% moisture.
Piles: when cone shaped multiply the diameter by the equal number. Then multiply that total by greatest footage depth. Multiply your sum by .210 .

| Grain Depth (feet) | Bin Diameter (feet) |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 20 | 22 | 24 | 26 | 28 | 30 |
| 1 | 252 | 305 | 363 | 426 | 494 | 567 |
| 2 | 504 | 610 | 726 | 852 | 988 | 1,134 |
| 3 | 756 | 915 | 1,089 | 1,278 | 1,482 | 1,701 |
| 4 | 1,008 | 1,220 | 1,452 | 1,704 | 1,976 | 2,268 |
| 5 | 1,260 | 1,525 | 1.814 | 2,130 | 2,470 | 2,835 |
| 10 | 2,520 | 3,050 | 3,628 | 4,260 | 4,940 | 5,670 |
| 15 | 3,780 | 4,575 | 5,442 | 6,390 | 7,410 | 8,505 |
| 20 | 5,040 | 6,100 | 7,256 | 8,520 | 9,880 | 11,340 |
| 25 | 6,300 | 7,625 | 9,070 | 10,650 | 12,350 | 14,175 |
| 30 | 7,560 | 9,150 | 10,884 | 12,780 | 14,820 | 17,101 |
